

# Queuing Software

## NEMO-Q's Solution

### EASY TO DEPLOY

NEMO-Q assesses the customer's needs and provides a customized system unique to your business. Deployment is simple. The system is 100% web based. After the hardware starts up, simply open Google Chrome to a unique URL and lock down into kiosk mode. Hardware is minimal: a tablet for a touchscreen, a mini-pc for the television. Employees can work with desktops, phones, tablets, or laptops.

### EASY TO MAINTAIN

The system and the hardware restart every night. If issues occur, our dedicated support team is ready to help.

### EASY TO MANAGE

Minimal hardware allows for IT and users to manage the systems easily. Users are able to change the content of TV signage through a simple web link. While monitoring your lobby in real time, the dashboard allows you to change the order your employee's call in customers.

### EASY TO USE APIs

Simple API calls to integrate wait times and customer information with your website and business tools.

## System Can Be Hosted:

On-Premise

A physical machine or a VM on your network

Cloud

Hosted on a dedicated third-party server such as Amazon or Rackspace

## NEMO-Q Provides 3 Unique URLs

1  
A URL FOR  
Employees

2  
A URL FOR THE  
Digital Signage  
(TV)

3  
A URL FOR THE  
Self-Service  
Check-In
